

Problem:

Quick treatment for stroke victims means saving the quality of life for thousands of people, as well as controlling the exorbitant cost of rehabilitation. Fewer than 5 percent of stroke victims arrive at the hospital in time to prevent brain or organ damage.

MedIcePax, LLC new EZ Cooling Emergency Kit for Stroke Victims provides crucial treatment for America's No. 1 disabler and No. 3 killer—the stroke. Long before the ambulance arrives, the instant ice packs help prevent brain and organ damage by reducing body temperature immediately, prior to receiving medical attention.

Increased brain temperature contributes to ischemic brain damage in patients post cardiac arrest. Studies have shown that lowering brain temperature, even by a few degrees decreases, ischemic damage. In studies of out of hospital cardiac arrest, induced hypothermia protocols have contributed to improved neurological outcomes. Ref. *N Engl J Med.* 2002; Feb 21;346(8):557-63

Studies have shown that hypothermic cooling may help improve the outcomes in stroke patients. Strokes cut off the supply of blood to the brain and can destroy cells quickly. MedIcePax LLC's EZ Cooling Emergency Kit for Stroke Victims helps to lower the body temperature, reducing the body's requirement for oxygen and helps to slowing the loss of brain and organ cell damage until the patient can receive the appropriate cooling therapy at the hospital.

- **MedIcePax, LLC can license your company to Manufacture and market any of patented products, or**
- **MedIcePax, LLC can quote contract manufacturing, or**
- **MedIcePax, LLC will sell any of its Patents.**
